

WHITE LABEL SALES SHEET

Version 1.0 - December 2015

You have several different options for sharing the content from this sales sheet with your customers.

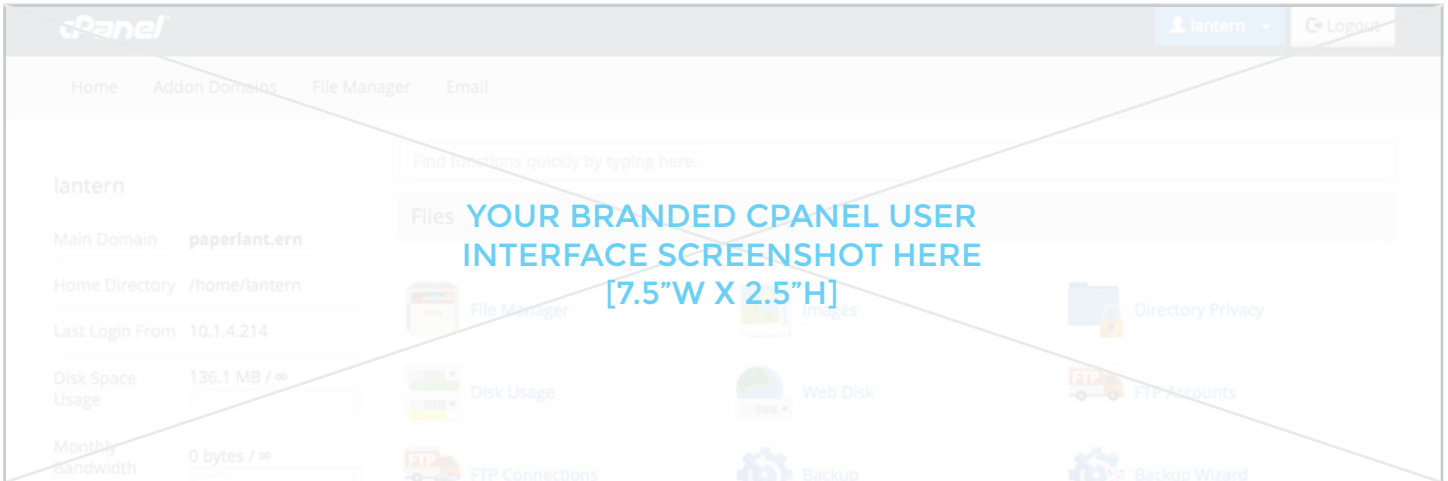

To customize, simply discard the first two pages of this PDF and then insert your images and information in the designated spaces. Note the recommended dimensions. If you choose to use the provided screenshot of the cPanel user interface, delete the instructional layer first.

Of course, you can always cut and paste provided images and information on your website, print collateral, etc. Please contact us at marketing@cpanel.com if you have any questions about this sales sheet or need additional resources.

YOUR COMPANY LOGO

cPanel

For every facet of your website

cPanel is a graphical, web-based control panel that makes site administration simple. Just point and click your way to website nirvana.

Putting you in the driver's set

- Email and file management
- Security customization
- SSH information access
- Log monitoring
- Domain and database configuration

YOUR CALL TO ACTION HERE

A rich feature seet

The cPanel interface boasts a large range of powerful, easy-to-use tools to help you run your website your way.

Mail

Create email accounts, forwarders, and autoresponders as well as account and user-level filtering to manage email. Fight spam with BoxTrapper, Apache SpamAssassin, and email authentication. Then, use mailing lists to broadcast your message.

Security

Configure password-protected directories, IP address denials, SSL/TLS, and GnuPG key settings to restrict access. Protect your site with HotLink Protection, Leech Protect, and ModSecurity.

Domains

Set up subdomains, addon domains, parked domains, and redirects to point visitors in the right direction. Identify your site with Simple DNS Zone Editor and Advanced DNS Zone Editor.

Apps galore

Take advantage of third-party software for blogs, bulletin boards, guest books, eCommerce, and more to build a robust, dynamic site.

Files

Edit and back up files and folders while monitoring your website's disk space usage.

Databases

Store large amounts of data and limit access using MySQL and PostgreSQL databases.

Logs

Know your audience and track your website's performance using Webalizer and AWStats.
